

Wireless Network Solutions for Distribution/Warehouse

AP and Antenna Articulating

AP Drop Mount

Polycarbonate Enclosure

WHSE Patch Antenna

"...A special antenna with a 15(H) x 120 (V) beamwidth that is absolutely fantastic for meeting warehouse coverage needs."

- A Wi-Fi Expert Blogger

Business Problems Solved

- Multiple mounting solutions designed for ceilings found in warehouse and manufacturing areas
- Durable enclosures that can protect valuable equipment from environmental threats
- Antennas specifically designed for RF coverage in challenging warehouse environments

AccelTex Solutions has engineered and manufactured Wi-Fi products for a variety of challenging warehouse and manufacturing settings. AccelTex Solutions has the wireless industry expertise and engineering capabilities to develop effective Wi-Fi solutions for warehouse and distribution centers.

We understand the challenges involved with deploying a Wi-Fi network in an industrial warehouse area—both indoors and outdoors. That is why we have designed and engineered products and accessories that are proven not only to just “work” in this environment, but to excel.

For example our warehouse patch antenna was purpose-built to focus RF coverage down warehouse aisles.

We can also develop customized solutions that can combine enclosures with antennas all into one comprehensive product that is easy as “plug & play” after connecting to an access point.
